Fun activities used to teach new skills

■ Courtney Fowler

Students at Tambrey Primary School enjoyed a fantastic selection last week of literacy, numeracy and science activities as part of National Science Week.

Teacher Tracey Prout said students enjoyed a range of activities organised by the specialist teachers in each of the learning areas.

"Dice and card games were used to explore numbers in mathematics," she said.

"The day saw students positively engaged in learning and excited to explore different classrooms around the school."

National Science Week was celebrated by schools all around the country from August 16-24.
